

HCU HafenCity Universität Hamburg Universität für Baukunst und Raumentwicklung

HAMBURGS NEUE UNIVERSITÄT
Europas erste Hochschule für die gebaute Umwelt

Prof. Dr. Harald Sternberg

**New Technologies in old sciences:
Mapping & Archaeology**

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Nuevas Tecnologías de Adquisición de datos

New Technologies for data acquisition

Prof. Dr. Harald Sternberg

HafenCity University Hamburg, Department of Geomatics
Hebebrandstrasse 1, 22297 Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Topics

- Introduction: development of laser scanner systems
- measuring methods and und systems
- accuracy / reflectivity
- data handling
- **BREAK**
- applications: Deformation Measurements
- conclusions
- **Outlook:**
- Tuesday: scanning with the IMAGER 5006
- Wednesday & Thursday: registration / modeling

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Tacheometer

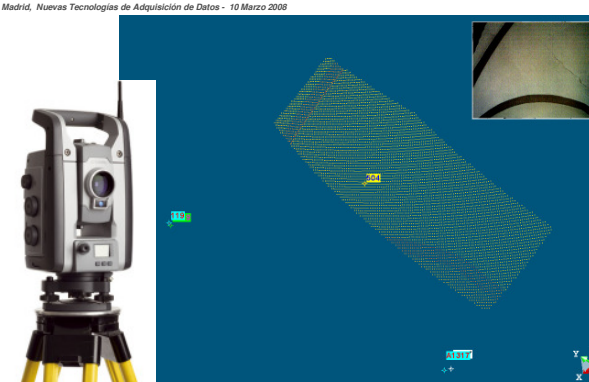

New Tacheometer are:

- motorized
- Automatic target recognition (ATR)
- Automatic target (LOCK)
- PowerSearch and remote control (robotic mode)
- Direct reflex measurement (up to 300 m)
- (like Leica TCRP1201-R300,
or Trimble S6 or Trimble VX station)
- Scanning of objects

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

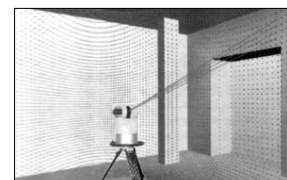

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Scanning

three-dimensional capturing of objects with laser distance measurements distributed as grid

With tacheometer only discret points

With scanner: grid points

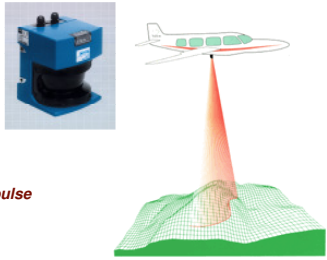

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Line-scanner

Line-Scanner (Sick LMS 200)

Scan angle : 180°
 Angle increment : 1°
 frequency : 75 Hz

Distance measurement with pulse
 + Reflectivity
 $\sigma < 5\text{mm}$
 Quality control of pieces

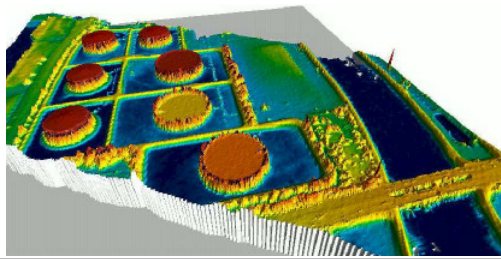

Airborne laserscanning

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

development

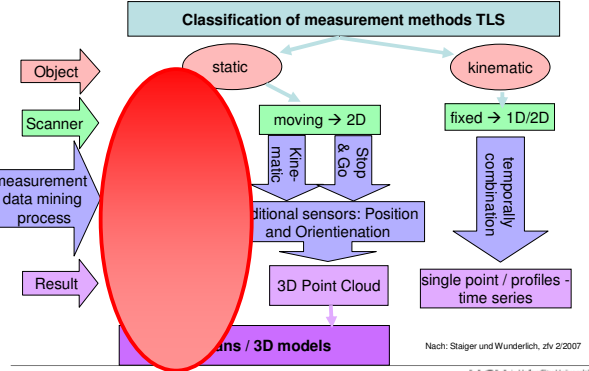

- Airborne Laserscanning
 (third dimension from movement of the airplane)

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Classification of measurement methods TLS

Object → Scanner → measurement data mining process → Result

static → moving → 2D → Kinematic → Stop & Go → additional sensors: Position and Orientation → 3D Point Cloud → Plans / 3D models

kinematic → fixed → 1D/2D → temporally combination → single point / profiles - time series

Nach: Staiger und Wunderlich, zfv 2/2007

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Pulse measurement (time-of-flight)

- Distance calculated from time of light pulse
- measurement of long distances
- Standard deviation of few mm

- CYRAX 2500 / Leica HDS ScanStation2
- Mensi GS100/200/GX
- Riegl LMS-Zxxx

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Pulse measurement (time-of-flight)

- laser beam in the CYRAX 2500 (2 rotating mirrors)

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Pulse measurement (time-of-flight)

- laser beam in RIEGL system (1 rotating mirror)

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Phase difference

- **More accurate as pulse**
- **Reduced distance**
- **Measure with higher frequency**
- **Standard deviation about 1 mm**

- IMAGER 5003 / 5006 (Zoller & Fröhlich)
- iQsun880 / FARO
- Callidus CPW 8000
- Trimble FX

Department Geomatik

HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

With Triangulation methods

- **known (fixed) base and measurement of the outgoing and incoming angle**
- **Only for short distances and small objects**
- **Standard deviation below 0.5 mm in a distance of less than 2 m**
- **single or double cameras**

- MENSİ S10 and S25
- Minolta VI - 910

Department Geomatik

HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Scan angle

Systems

System	method	accuracy	frequency	distance	Scan angle
MENSI S10	Triangulation	0.4 mm	100 Pkte / sec	10 m	40 x 320 gon
Minolta VI-910	Triangulation	0.1 mm	120000 Pkte / sec	2,5 m	12,5 x 12,5 gon
Z&F IMAGER 5003	Phase difference	3 mm	625000 Pkte / sec	53,6 m	400 x 344.4 gon
MENSI GS100	pulse	6 mm	5000 Pkte / sec	100 m (200 m)	400 x 60.7 gon
CYRAX 2500	pulse	4 mm	1000 Pkte / sec	100 m	44.4 x 44.4 gon
Riegl LMS-Z420	pulse	10 - 15 mm	6000 Pkte / sec	Max. 800 m	88.9 x 377.8 gon

Department Geomatik **HCU** HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

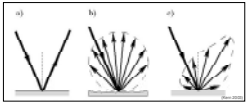

Accuracy depends on:

- distance
- reflectivity of the object
- Spot size (0.6 mm / 10 m – 6 mm / 10 m)
- grid space (0.03mm / 10 m – 7 mm / 10 m)

Department Geomatik **HCU** HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Reflections

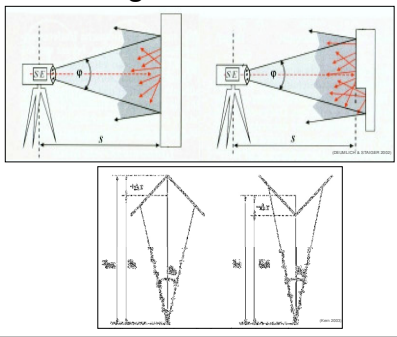

a) Reflection as mirror
b) diffuse Reflexion
c) combined reflection

Department Geomatik HCU HafenCity Universität Hamburg

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Deformation measurements at historical buildings with the help of three-dimensional recording methods and two-dimensional surface evaluations

- ◆ Classical Deformation Measurements
- ◆ The terrestrial 3D laser scanning systems
 - ◆ Hard- and Software
- ◆ Old Church Pellworm – As built documentation
- ◆ St. Johannis Cathedral Meldorf –
 - ◆ Recording of the present state
 - ◆ Deformation measurements

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Classical Deformation Measurements

- ◆ Only discrete signaled points
- ◆ Distributed uniformly as grid
- ◆ or attached at selected locations
- ◆ Standard deviation of 3 D position at 1...2 mm

- ◆ Only movement of selected points - not entire building
- ◆ Measuring the movements of the cover around the church

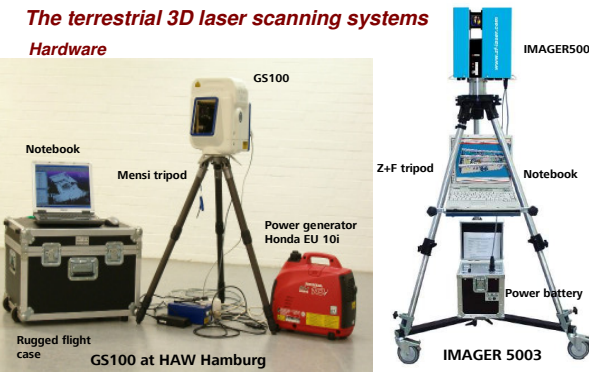

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Surveying control points and scanning

Department Geomatik HCU HafenCity Universität Hamburg

Madrid, Nuevas Tecnologías de Adquisición de Datos - 10 Marzo 2008

Conclusions

- ◆ Good results from 3D laser scanning under non-ideal conditions in the churches for documentation of indoor objects (cultural heritage)
- ◆ Data acquisition relatively simple and quick
- ◆ Data post processing very complex and time consuming, but the 3D-model is not needed every time
- ◆ No scanner for all applications, but for each application one specific scanner
- ◆ 3D laser scanning system = scanner + software for post processing, but often third party software has to be used
- ◆ New possibilities for deformation analysis
 - surfaces instead of single points
- ◆ Next deformation measurement in 4 years, further improvement of scanner evaluation software

Thank you for your attention
